AgentOps Helpdesk: request lifecycle (solid = built, dashed = planned)

Employee asks for IT help in Teams
(identity from Entra ID sign-in)

Triage (parent agent: AgentOps Helpdesk)

Classify into one category
Knowledge | Ticket | Remediation | Status Check | Escalate
(at most one clarifying question)

wf_Triage_LogRoutingDecision
create Agent Decision row
(summary, category, reason; email and conversation ID from system)

Open ServiceNow Interaction
for every request (D27)

Category?

Knowledge

Ticket

Status Check

Remediation

Escalate

Knowledge (child agent + feedback topic)

ag_Knowledge
answer from SharePoint KB Articles only,
cite the article

Knowledge Feedback topic
record Knowledge / Answered
+ cited article

Did this solve
your problem?

Yes

No

Outcome = Not found
raise normal-priority ticket

Outcome = Resolved (self-service)
close Interaction

ServiceNow (topics on the parent agent, D28)

Status Check
look up the caller's incidents,
summarise status

redirect

Ticket
confirm details, create Incident
linked to the Interaction

Escalate
P1/P2 Incident, security or major-incident group,
immediate notification

Return incident number
or status to the employee

Remediation (intake topic + Dataverse-triggered flow, D29)

Request Account Fix topic
wf_Remediation_SubmitRequest:
Remediation Request (Pending)

Dataverse-triggered flow: eligibility rules
fix Active | requester = target |
department eligible

Fail: refer to IT

Pass

Approval
required?

No

Yes

Manager approval
(manager from Entra ID)

Approved

Execution
channel?

No API

API

Desktop flow (RPA)
unlock / MFA reset on
legacy admin console

Cloud flow (API)
add user to Entra
VPN-Users group

Succeeded?

No

Yes

Resolve incident,
notify the employee

Rejected: record,
update incident

create

wf_Common_UpdateDecision
update the same Agent Decision row:
Handled By, Outcome, Source Article, Incident Number

update

Systems of record
